Unit 2, Lesson 15: Part-Part-Whole Ratios

1. Here is a tape diagram representing the ratio of red paint to yellow paint in a mixture of orange paint.

a. What is the ratio of yellow paint to red paint? $2:3$ or $6:9$

cups of red paint

3	3	3
---	---	---

cups of yellow paint

3	3
---	---

b. How many total cups of orange paint will this mixture yield?

15 cups

Y	R	O
2	3	5
6	9	15

1/2

2. At the kennel, the ratio of cats to dogs is 4 : 5. There are 27 animals in all. Here is a tape diagram representing this ratio.

4 number of cats

--	--	--	--

5 number of dogs

--	--	--	--	--

C	D	Total
4	5	9
12	15	27

a. What is the value of each small rectangle? 3

b. How many dogs are at the kennel? 15 dogs

c. How many cats are at the kennel? 12 cats

1/3

3. Last month, there were 4 sunny days for every rainy day. If there were 30 days in the month, how many days were rainy? Explain your reasoning. If you get stuck, consider using a tape diagram.

4. Noah entered a 100-mile bike race. He knows he can ride 32 miles in 160 minutes. At this rate, how long will it take him to finish the race? Use each table to find the answer. Next, explain which table you think works better in finding the answer. (Next Page)

S	R	Total
4	1	5
24	6	30

4:1:5 is the part, part, whole
I had to multiply 5 by 6
to get up to 30 days, so
when I multiply sunny
and rainy by 6 I get
24 sunny and 6 rainy. 3

Table A: Pretty quick to find unit rate and multiply up ☺

distance (miles)	elapsed time (minutes)
32	160
1	5
100	500

Handwritten notes for Table A:
 - From 32 to 1: $\div 32$
 - From 1 to 100: $\times 100$
 - From 160 to 5: $\div 32$
 - From 5 to 500: $\times 100$
 - Unit rate is 1 mile per 5 minutes.

Table B: Not too bad. I wouldn't have included 96 miles.

distance (miles)	elapsed time (minutes)
32	160
96	480
4	20
100	500

Handwritten notes for Table B:
 - From 32 to 96: $\times 3$
 - From 160 to 480: $\times 3$
 - From 480 to 20: $\div 8$
 - From 20 to 500: $\times 25$
 - From 4 to 100: $\times 25$

(from Unit 2, Lesson 12)

1/2

5. A cashier worked an 8-hour day, and earned \$58.00. The double number line shows the amount she earned for working different numbers of hours. For each question, explain your reasoning.

a. How much does the cashier earn per hour?

Handwritten note: halfway between 0 & 14.5 is \$7.25

b. How much does the cashier earn if she works 3 hours?

Handwritten note: either $(3 \times 7.25) = 21.75$ or add $14.5 + 7.25 = 21.75$

(from Unit 2, Lesson 13)

6. A grocery store sells bags of oranges in two different sizes.

- The 3-pound bags of oranges cost \$4.
- The 8-pound bags of oranges for \$9. *cheaper*

Which oranges cost less per pound? Explain or show your reasoning.

(from Unit 2, Lesson 10)

Weight (pounds)	Cost (\$)	Unit Rate (\$/pound)
3	\$4	1.33
8	\$9	1.125

Handwritten notes for Question 6:
 - could find for same number of oranges
 - 24 is a common multiple OR
 - find unit rate
 - Total 1/11
